

Multiple Layer-2 Switches

Goal: Emulate the behavior of five Layer-2 Switches connected together for traffic fail-over testing.

In this test scenario, the function of several layer-2 switches will be emulated using multiple LANforge Bridge devices with Spanning Tree Protocol (STP) so that each bridge can be connected to at least two others and fail-over tests can be demonstrated.

1. Setup seven Netsmith Connections.

A. Right-click inside the Netsmith window and select **New Connection**

B. Accept defaults Auto Create everything then click **OK**.

C. Repeat and create a total of seven (7) connections

D. Click the **Apply** button to commit the changes in Netsmith to the LANforge-Server

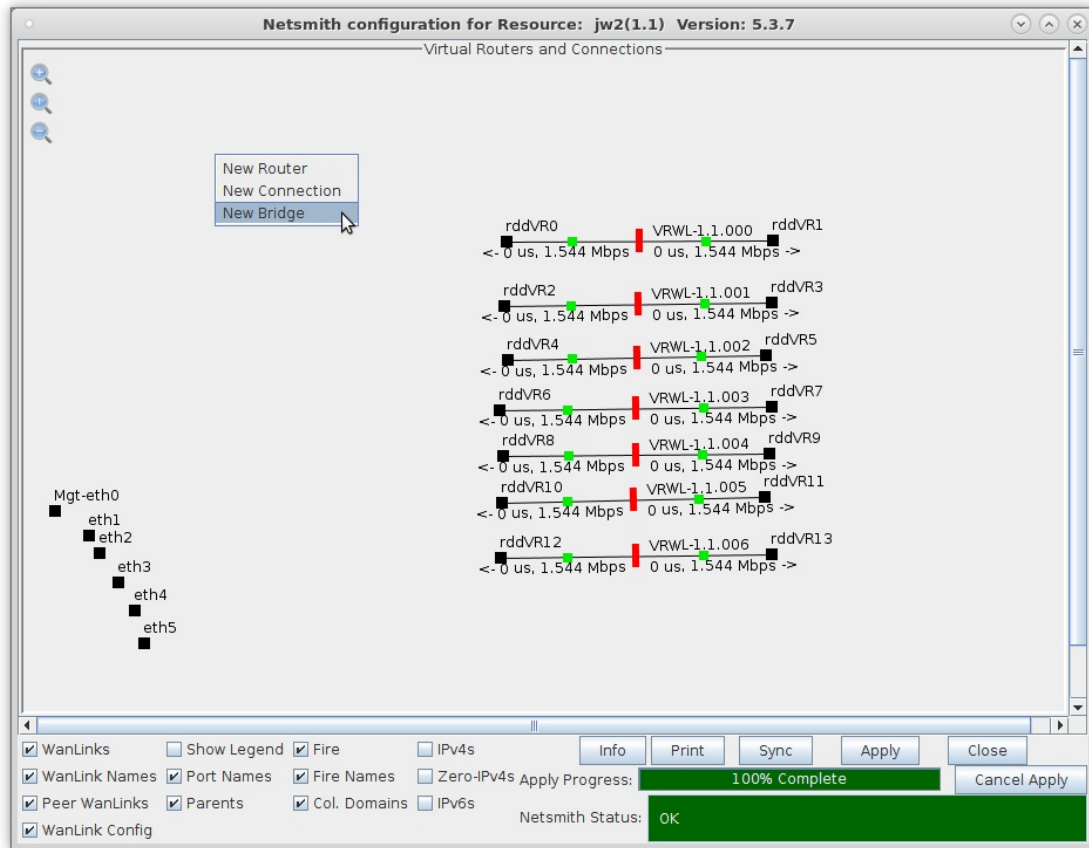

A. **NOTE:** Modifications in Netsmith are only sent to the LANforge-Server after Applying them

For more information see [LANforge-GUI User Guide: Virtual Interfaces](#)

2. Setup five Bridge devices.

A. Right-click inside the Netsmith window and select **New Bridge**

B. Select the **Bridge** button, enter a name and quantity 5

A. **NOTE:** The 5 bridges here are sw-0, sw-1, sw-2, sw-3, and sw-4

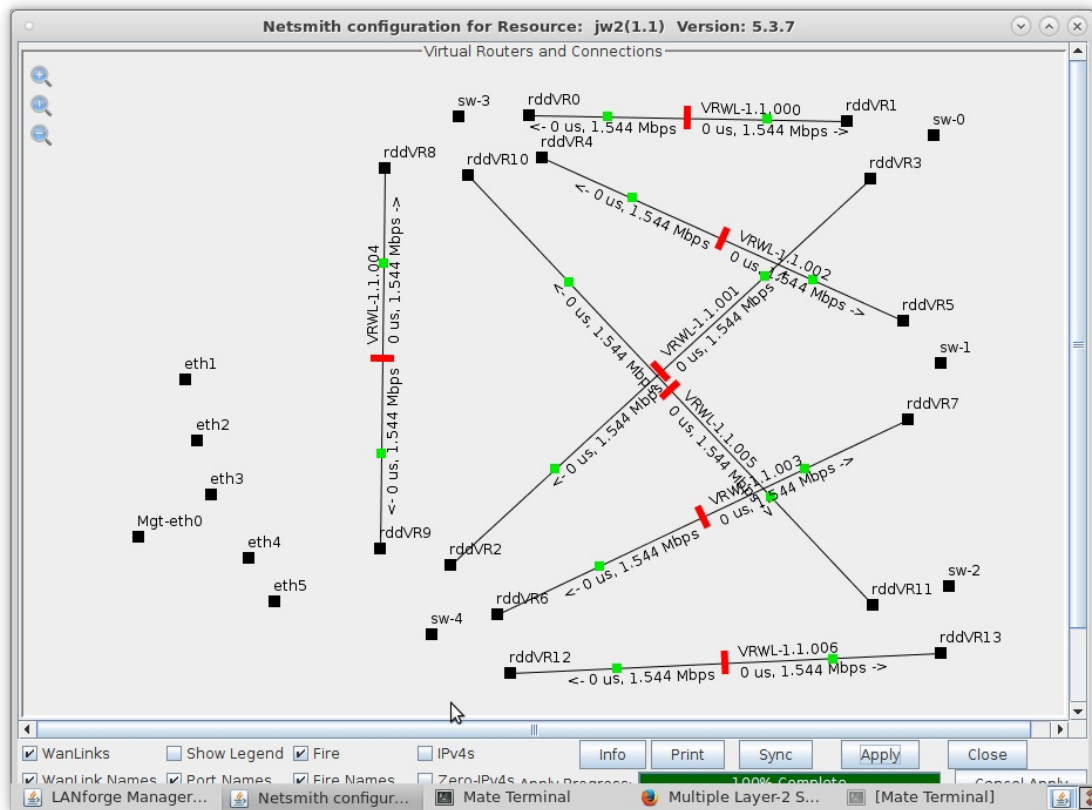

- C. In Netsmith, position the bridge devices into separate areas so they can be grouped with WanLink entry points

For more information see [LANforge-GUI User Guide: Ports \(Interfaces\)](#)

3. Move the WanLinks into their desired positions.

A. Position the WanLink entry points in groups near the bridges as follows:

- A. 2 entry points near sw-0, sw-1, and sw-2 (one to sw-3 and one to sw-4)
- B. 3 entry points near sw-3 and sw-4 (one to sw-0, sw-1, and sw-2)
- C. Bridges sw-3 and sw-4 should also have a WanLink between them

B. Click Netsmith **Apply** to commit the changes

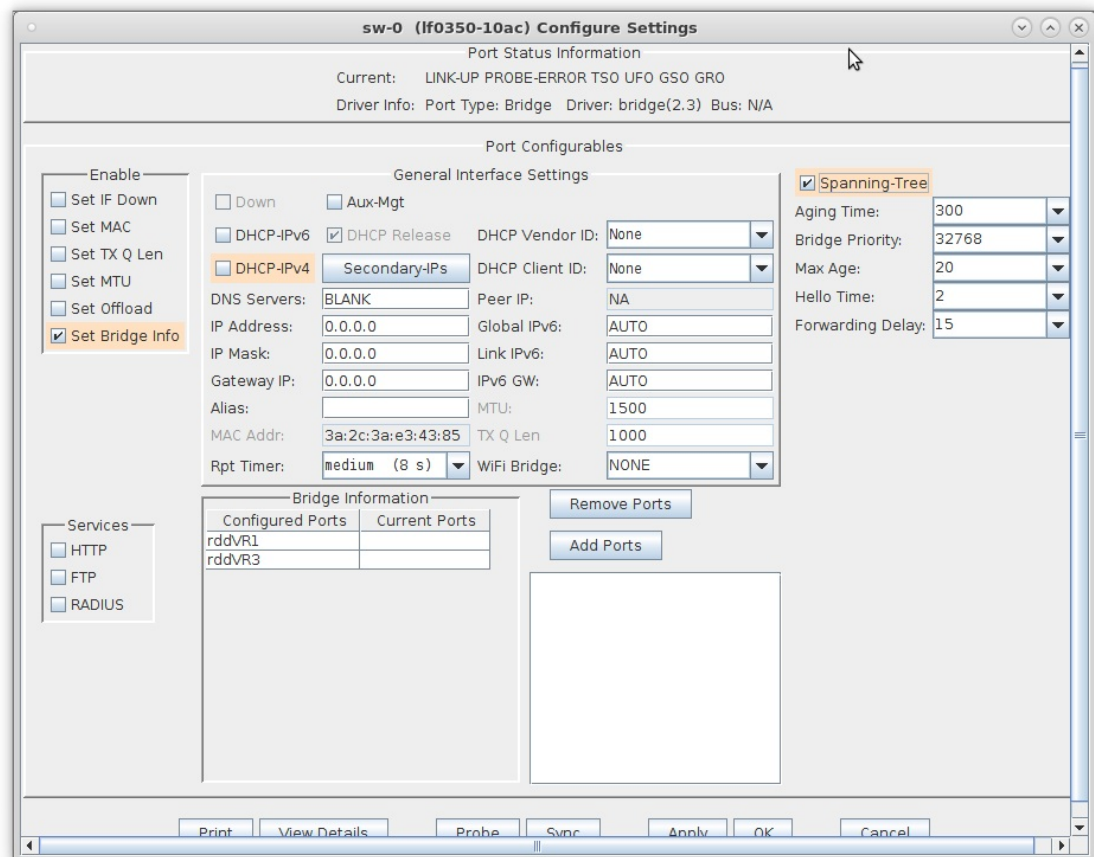

4. Modify each Bridge to enable Spanning Tree Protocol (STP) and add Bridge Members.

A. Right-click bridge sw-0 and select **Modify Port**

B. Select the 'Set Bridge Info' and 'Spanning Tree' checkboxes, then add bridge members rddVR1 and rddVR3

A. **NOTE:** Selecting the 'Spanning Tree' checkbox enables Spanning Tree Protocol (STP) for that port

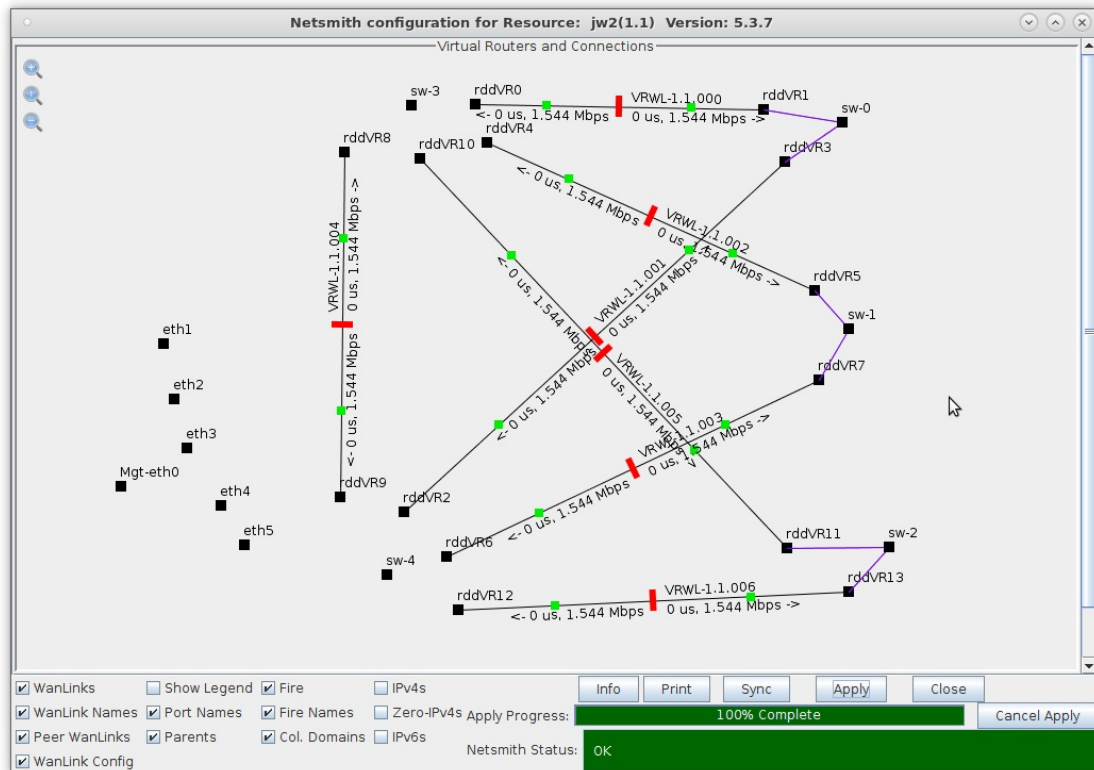

B. Click the **Apply** or **OK** button to commit the changes in bridge configuration to the LANforge-Server

C. Right-click bridge sw-1 and select **Modify Port**

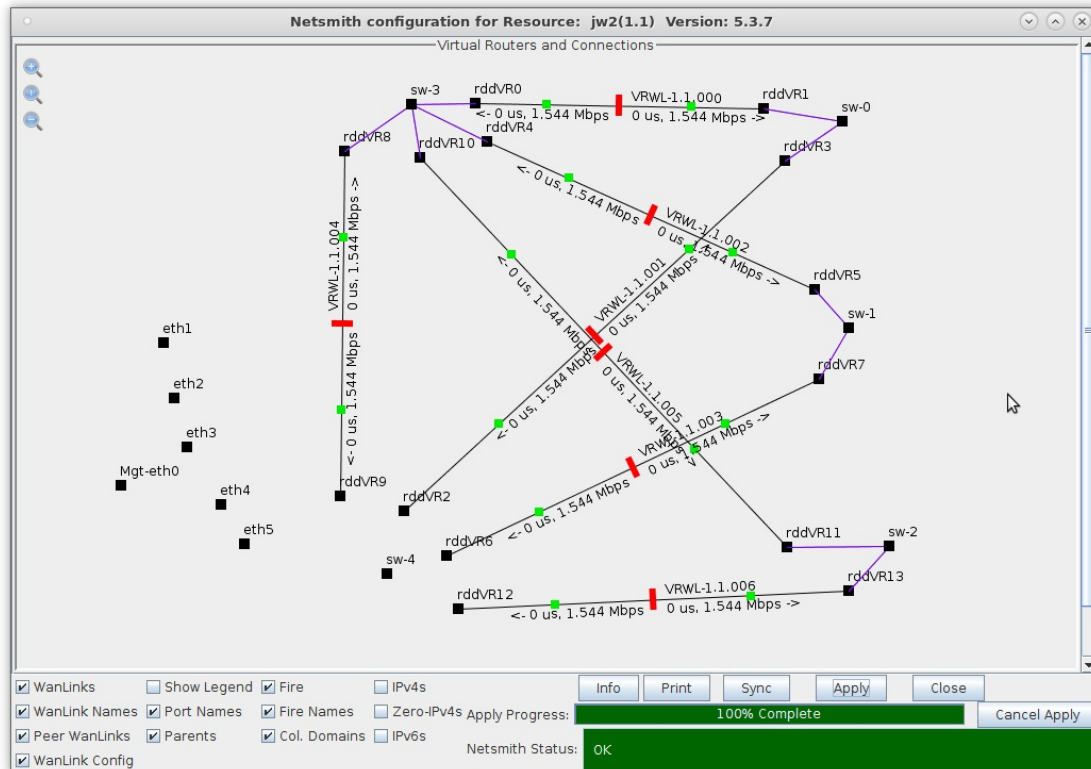

A. Enable STP and add members rddVR5 and rddVR7

D. Right-click bridge sw-2 and select **Modify Port**

A. Enable STP and add members rddVR11 and rddVR13

E. Right-click bridge sw-3 and select **Modify Port**

A. Enable STP and add members rddVR0, rddVR4, rddVR8 and rddVR10

F. Right-click bridge sw-4 and select **Modify Port**

A. Enable STP and add members rddVR2, rddVR6, rddVR9 and rddVR12

5. Create virtual interfaces for traffic generation and fail-over tests.

A. Right-click sw-0 and select **Create Ports** and choose Redirect

Create VLANs on Port: 1.1.34

1 MAC-VLAN 802.1Q-VLAN Redirect Bridge Bond GRE Tunnel
 WIFI STA WIFI VAP WIFI Monitor WIFI Virtual Radio

2 Shelf: 1 Resource: 1 (jw2) Port: 34 (sw-0)

3 VLAN ID: DHCP-IPv4
Parent MAC: 9e:2f:cc:39:a8:ce DHCP Client ID: None

4 Down

Apply Cancel Ready

A. Enter a starting MAC address, quantity 5, and starting IP address

D. Repeat for bridge sw-1

A. **NOTE:** The Netsmith display has been 'zoomed-out' by clicking the '-' magnifying glass icon located at the top left of the Netsmith display

E. Repeat for bridge sw-2

6. Create Layer-3 connections.

A. On the **Layer-3** tab, create a Layer-3 UDP connection between rddB#0 and rddD#0

cx-01 - Create/Modify Cross Connect

CX Name: cx-01
CX Type: LANforge / UDP

Resource: 1 (1f0350-10ac)

Endpoint A	Endpoint B
Port: 43 (rddB#0)	Port: 48 (rddD#0)

B. Create 4 more connections between the remaining rddB and rddD ports

C. Create 5 connections between the rddD and rddF ports

A. Repeat this step for the rddF and rddB ports for a total of 15 connections

7. Test Fail-Over condition.

The screenshot shows the LANforge Manager Version 5.3.7 interface. The 'Layer-3' tab is selected, displaying a table of cross connects for the selected test manager. The table has 12 columns: Name, Type, State, Pkt Rx A, Pkt Rx B, Bps Rx A, Bps Rx B, Rx Drop % A, Rx Drop % B, Drop Pkts A, and Drop Pkts B. There are 15 rows of data, all with a state of 'Run' and 0 drop percentages.

Name	Type	State	Pkt Rx A	Pkt Rx B	Bps Rx A	Bps Rx B	Rx Drop % A	Rx Drop % B	Drop Pkts A	Drop Pkts B

Logged in to: 192.168.100.103:4002 as: Admin

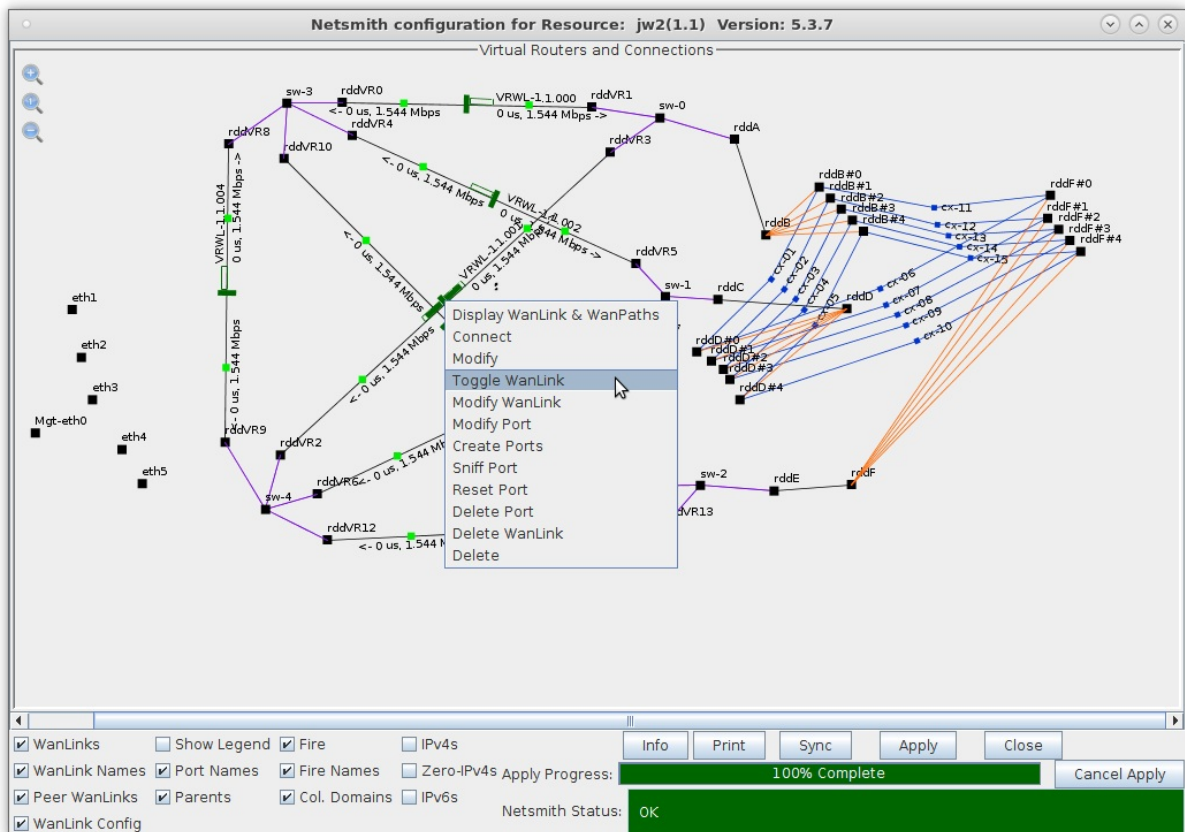

A. On the **Layer-3** tab, select all 15 connections and click **Start**

8. In Netsmith, verify traffic is flowing through sw-3 or sw-4 via 3 separate WanLinks

A. In this case, VRWL1.1.001, VRWL-1.1.003 and VRWL-1.1.006 all show traffic flowing

9. Right-click WanLink VRWL-1.1.001 and select **Toggle WanLink**

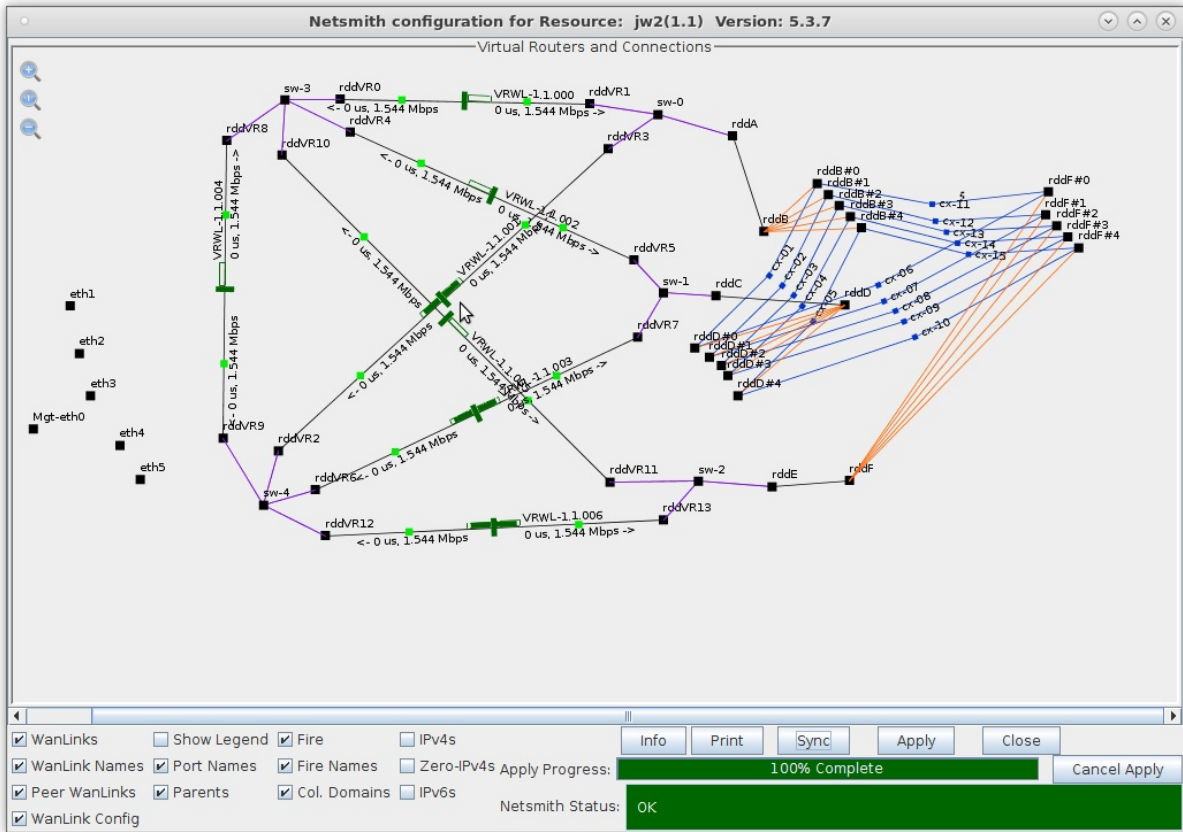

10. After approximately 1 minute, the traffic will find an alternate path

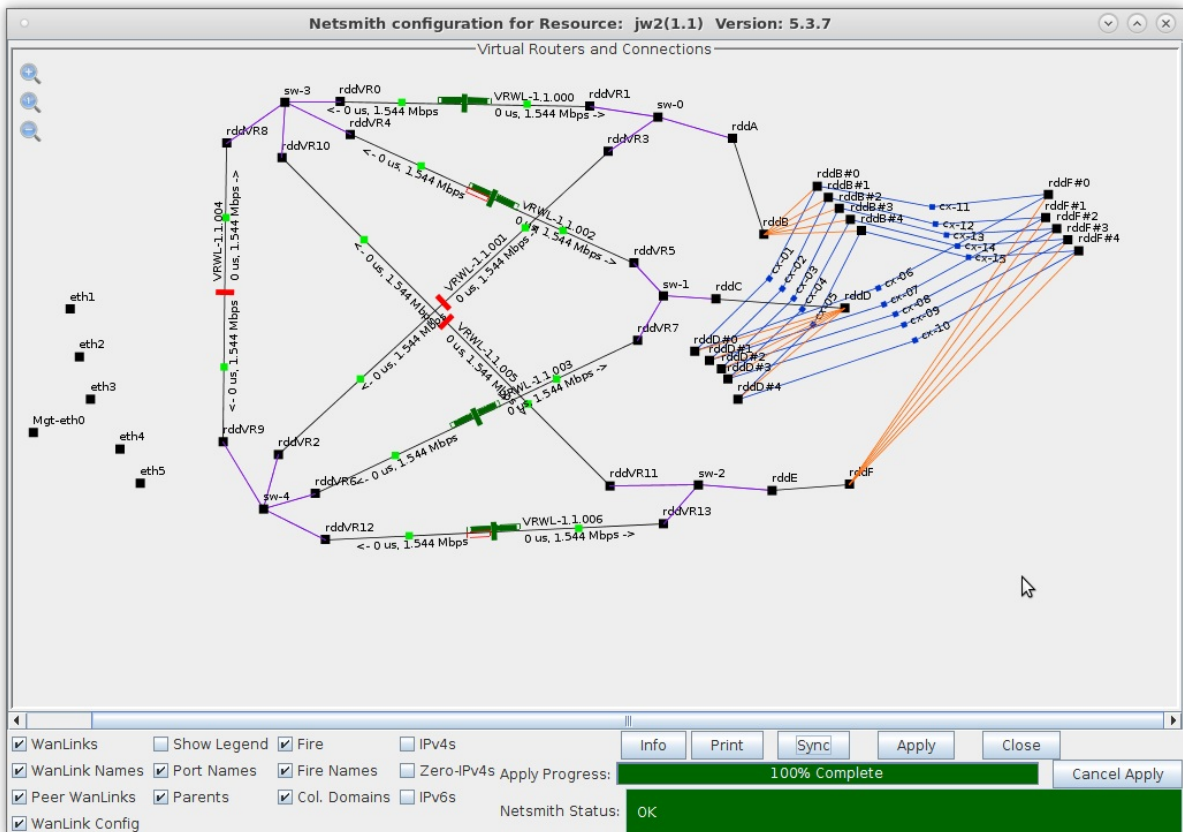

11. Right-click WanLink VRWL-1.1.001 and select **Toggle WanLink**

12. After approximately 1 minute, traffic resumes on its original path

13. Traffic flow after simulating multiple path failures

A. A sample LANforge HTML report of this fail-over test can be found here:
