

Changing the logo generated in GUI reports

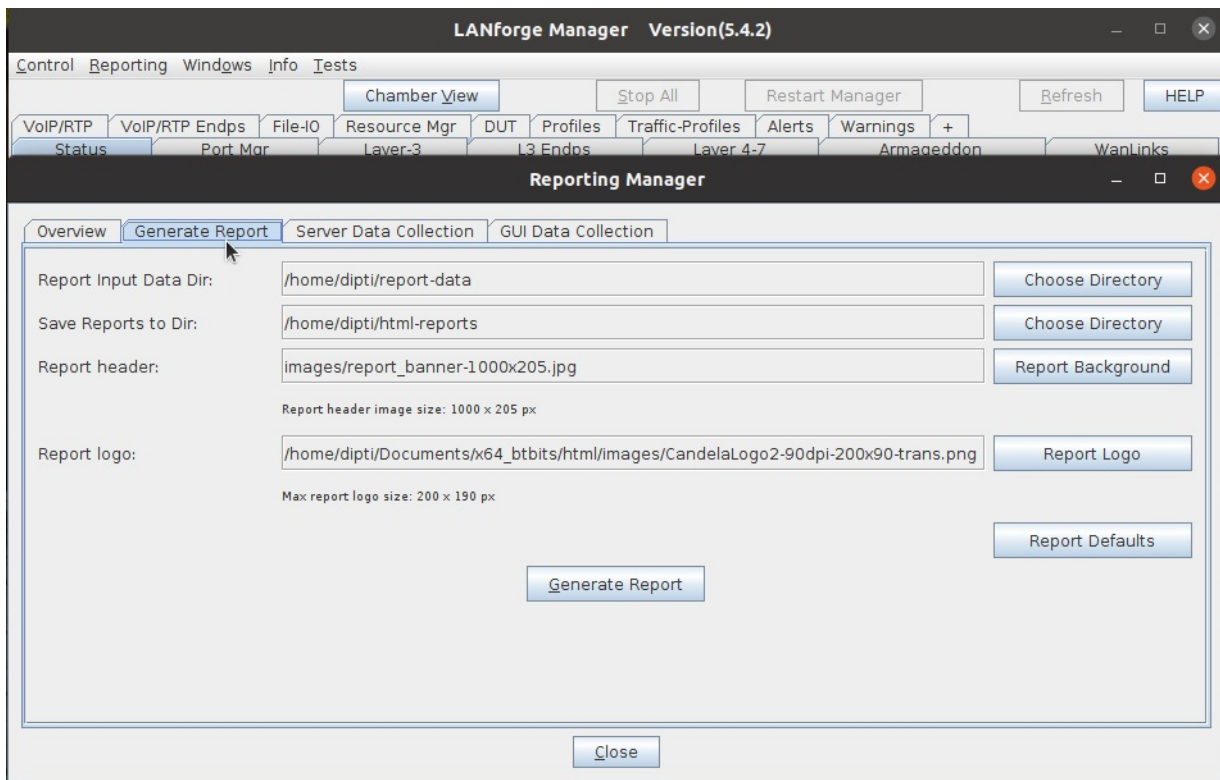

Goal: Correctly access and change the logo displayed at the top of GUI-generated reports in your local Lanforge GUI.

1. Open your LANforge GUI, click on Reporting, and Reporting Manager

A screenshot of the LANforge Manager GUI, version 5.4.2. The window title is "LANforge Manager Version(5.4.2)". The menu bar includes "Control", "Reporting", "Windows", "Info", and "Tests". The "Reporting" menu is open, showing options: "Print (Fit to Page)", "Print (Multi Page)", "Dynamic Reports", "Reporting Manager", and "Table Report Builder". The "Reporting Manager" option is highlighted. The main interface shows a "Current Users" section with a list of users and their IP addresses, and a "Saved Test Configurations" section with a dropdown menu set to "DFLT" and buttons for "Load", "Download DB", "Show Progress", "Delete", and "Save". The status bar at the bottom indicates "Logged in to: 192.168.92.14:4002 as: default".

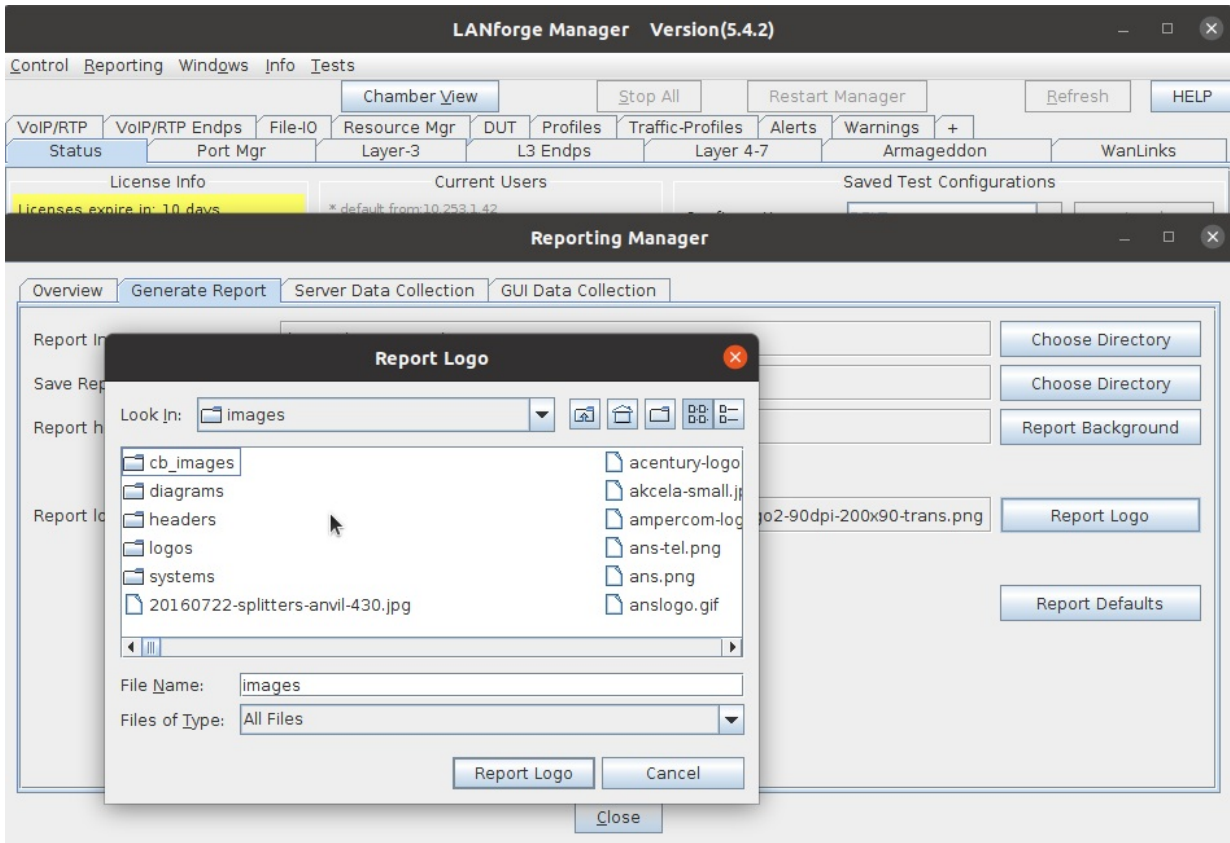

2. Click on Generate Report

3. Find a desired image instead of the default report logo that fits the report logo size (within 200 x 90 px size range) and save the image into the html/images/ path within the bt_bits directory.

4. Once the desired image is within the appropriate images folder, scroll over back to the **Reporting Manager** tab, click on **Report Logo** and select the image (and image path) to be placed in the Report logo path. Then select **Report Logo**. Now, once a user generates a report, the new report should print out with a different logo at the top.
