

LANforge Products

WiFi Client Emulators

Test Access Points with hundreds of virtual stations.

Traffic Generation

Generate network traffic to test LAN and WANs. Clusters of systems can test many different network points at the same time.

Network Impairments/Emulators

Emulate wide area networks with configurable latency, packet loss, bandwidth and more.

RF Enclosures

Isolate your WiFi test systems for reliable testing results. Programmable turn-tables offer automated testing at different orientations. [More details about WiFi chambers.](#)

Programmable Attenuators

Emulate distance between WiFi components. Includes automated Mesh testing scenarios and drag and drop placement of locations.

DFS/Noise Generators

Emulate RADAR signals and other RF noise and interference.
