

Generating Traffic for DSLAM Testing

Goal: Set up and run traffic to a DSLAM system as shown in the [CT570 product description](#).

Please refer to the diagram in the CT570 link above. In this test scenario, the LANforge-FIRE Core is one interface on a LANforge system. The LANforge-FIRE Edge is another interface on the same LANforge system. The LF Core interface is connected to the upstream DSLAM interface either directly or through a switch. The CPEs are connected to a multi-port VLAN switch which has a VLAN trunk that is connected to the LF Edge. Traffic is sent between the LF Core and the LF Edge to achieve end-to-end network traffic testing of the DSLAM system.

1. Connect one LANforge-FIRE interface to the DSLAM upstream internet connection. This is the LF Core part of the diagram mentioned above.
2. Set up the LANforge port so that it has a valid IP address and IP mask.
 - A. Go to the Port Manager

The screenshot shows the LANforge Manager interface, specifically the Port Manager section. The window title is "LANforge Manager Version(5.3.3)". The interface includes a menu bar (Control, Reporting, Tear-Off, Info, Plugins), a toolbar with buttons for "Stop All", "Restart Manager", "Refresh", and "HELP", and a series of tabs for various management functions. The "Port Mgr" tab is active, displaying a table titled "All Ethernet Interfaces (Ports) for all Resources." The table has columns for Port, Phase, Down status, IP, SEC, Alias, Parent Dev, RX Bytes, RX Pkts, Pps RX, bps RX, TX Bytes, TX Pkts, and Pps TX. The data in the table is as follows:

Port	Pha...	Down	IP	SEC	Alias	Parent Dev	RX Bytes	RX Pkts	Pps RX	bps RX	TX Bytes	TX Pkts	Pps TX
1.1.0			192.168.100.86	0	eth5		5,973,034	14,544	7	7,098	8,466,925	10,094	2

1.1.5			0.0.0.0	0	eth4		0	0	0	0	3,020	32	0

At the bottom of the window, it says "Logged in to: brent-6port:4002 as: Admin".

B. Modify the port connected to the DSLAM. Set a valid network IP address and IP mask.

3. Set up virtual interfaces.

A. On the **Port Mgr** tab, select the port that will connect to the multi-port switch and will also be your VLAN trunk. This is the LF Edge part of the diagram.

B. Click the **Create** button:

- A. Select the **802.1Q-VLAN** virtual interface type
- B. The **VLAN ID** should correspond to your multi-port switch VLAN configuration
- C. Enter **Quantity** (number of virtual interfaces to be created)
- D. Enter the appropriate IP address and IP mask
- E. Click **Apply** to create the virtual interfaces

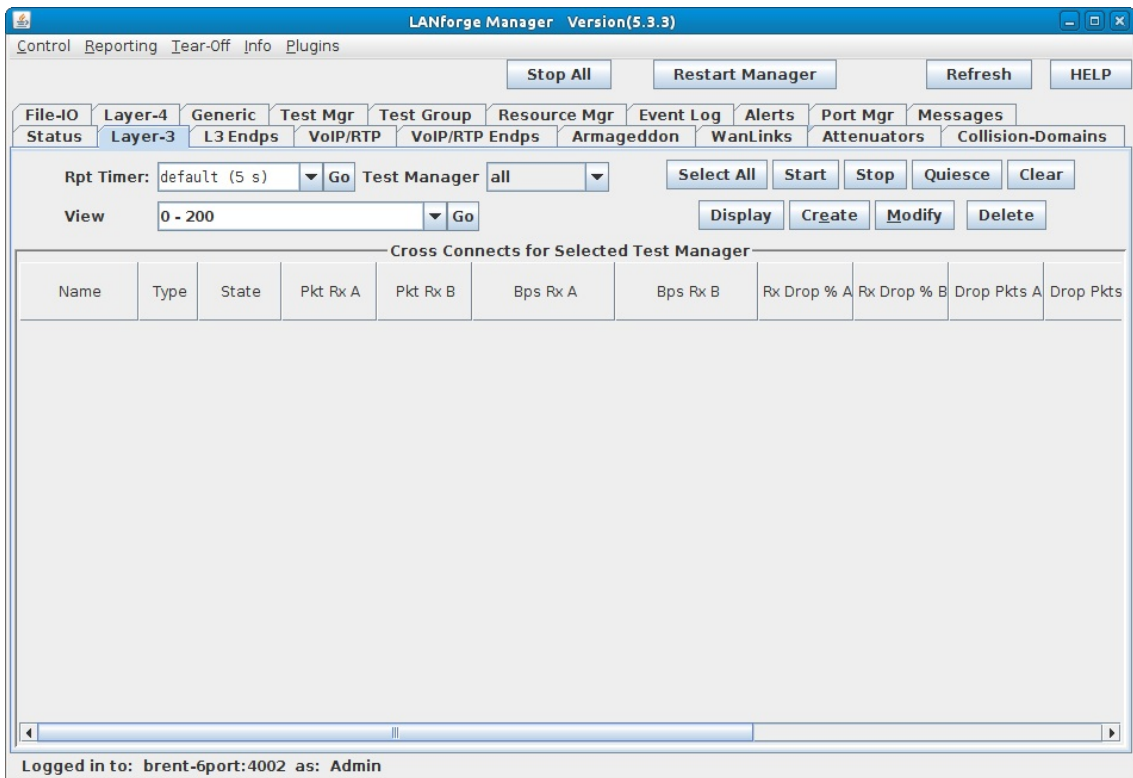

C. Verify that the virtual interfaces are created and have the correct IP assignments

4. Create Layer-3 connections.

A. Go to the **Layer-3** tab

B. Click the **Create** button

- A. Fill in a connection name, select a connection type and set the report timer
- B. Make endpoint A the DSLAM upstream port or LF Core
- C. Make endpoint B the CPE downstream port or LF Edge
- D. You can make the TX/RX rates asymmetric for the connection to simulate how the connection would be used in a real-world scenario. Here we have about 5Mbps downstream (DSLAM to CPE) and 1Mbps upstream (CPE to DSLAM).
- E. Click **Apply** to create the connection

C. Create multiple connections

Apply Close

- A. Click **Batch-Create** (located in the Layer-3 connection's Create/Modify window) to create four additional connections.
- B. Set **Quantity** to 4, **Port Increment A** to 0.
- C. Click **Apply**.

5. Run traffic.

A. Select the connections you want to start

The screenshot shows the LANforge Manager interface with the 'Test Mgr' tab selected. The 'Cross Connects for Selected Test Manager' table displays five connections (cx-01 to cx-05) all in a 'Stopped' state. The interface includes various control buttons like 'Stop All', 'Restart Manager', and 'Refresh'.

Name	Type	State	Pkt Rx A	Pkt Rx B	Bps Rx A	Bps Rx B	Rx Drop % A	Rx Drop % B	Drop Pkts A	Drop Pkts
cx-01	LF/UDP	Stopped	0	0	0	0	0	0	0	0
cx-02	LF/UDP	Stopped	0	0	0	0	0	0	0	0
cx-03	LF/UDP	Stopped	0	0	0	0	0	0	0	0
cx-04	LF/UDP	Stopped	0	0	0	0	0	0	0	0
cx-05	LF/UDP	Stopped	0	0	0	0	0	0	0	0

B. Click the **Start** button

The screenshot shows the same LANforge Manager interface, but the connections are now in a 'Run' state. The table shows active traffic statistics for each connection, including packet counts and bit rates. The 'Start' button in the interface is highlighted.

Name	Type	State	Pkt Rx A	Pkt Rx B	Bps Rx A	Bps Rx B	Rx Drop % A	Rx Drop % B	Drop Pkts A	Drop Pkts
