

Generating Traffic to saturate a particular WiFi Channel

Goal: Setup and run Wireless LAN traffic using the LANforge CT523 in order to fully saturate a WiFi channel.

In this test scenario, the LANforge CT523 is used to simulate 4 virtual wireless stations on one radio that associate with an access point on the other radio. This allows a single LANforge machine to be a complete WiFi network. Please see the [Wifi Testing](#) cookbook example first. These steps assume the configuration from that cookbook is already in place.

1. Create a virtual AP on wiphy1.
 - A. Go to the Port Manager

Logged in to: 192.168.100.195:4002 as: Admin

- B. Select port wiphy1 and click Create

C. Select the **Wifi VAP** button, then enter **MAC**, **Quantity**, **STA ID**, and **SSID**. Enter IPv4 address info:

D. Configure the radio's channel (which will apply to the VAP that was just created). Select the wiphy1 interface in the Port-Mgr tab and click **Modify**. Select the channel, and optionally the country-code, and then press **Ok**. If you elect to change the country code, you must do so on all radios in your system in order for proper function.

For more information see [LANforge User's Guide: Ports \(Interfaces\)](#)

2. Use the Netsmith feature to create a virtual router and configure DHCP for the AP.
 - A. Go to the **Status** tab, and click the Netsmith button for Resource 1.
 - B. Drag the existing interfaces into a more pleasing layout.

- C. Right-Click in empty space and create a new Virtual Router. Just click OK, using the default configuration.
- D. Drag the VAP interface into the virtual router and click **Apply** at the bottom-right of the Netsmith window..
- E. Double-click the vap0 icon (which should now be green) to bring up the **Create/Modify Connection** window.
- F. Select the DHCP option, and then fill in the **Range Min** and **Range Max** values appropriately.
- G. Apply Netsmith again and the configuration should be done.

3. Use Batch-Modify to configure all of the existing WiFi stations to talk to the new AP.

- A. Go to the **Port-Mgr** tab, select sta0, sta1, sta2, and sta3, and then click the **Batch Modify** button. Configure the SSID to match the AP, and then press OK

The LANforge Port Batch Modifier window is divided into two main sections. The top section, labeled '1 Up/Down', contains fields for DHCP Release, DHCP Client ID, MTU, IPv6 GW, Global IPv6, Link IPv6, DHCP-IPv6, TX Q Len, WiFi Bridge, and HTTP. The bottom section, labeled '2 SSID', contains fields for SSID (set to 'test-195-b'), Key/Phrase, Freq/Chan, RTS, AMPDU-Factor, Max-AMSDU, WPA, WEP, Disable HT40, Scan Hidden, Verbose Debug, Post IF-UP Script, WiFi AP, Mode, Rate, Tx-Power, AMPDU-Density, br ip, WPA2, Disable SGI, and Allow Migration. Buttons for 'Clear DHCP', 'Up', 'Down', 'Down Logout', 'Portal Re-login', 'Portal Logout', and 'Portal Login' are located at the top. A search bar and 'Apply', 'OK', 'Cancel' buttons are also present.

- B. The station interfaces should now get DHCP addresses matching the new AP

The LANforge Manager interface displays various tabs for network management, including Control, Reporting, Tear-Off, Info, Stop All, Restart Manager, Refresh, and HELP. The main area shows a table of network statistics for various interfaces. The table has columns for Port, Phn..., Down, IP, SEC, Alias, RX Bytes, RX Pkts, Pps RX, bps RX, TX Bytes, TX Pkts, Pps TX, bps TX, and C. The data is organized into a table with 14 columns and 14 rows.

4. Create Layer-3 connections between the station interfaces.

- A. Go to the **Layer-3** tab. If there are existing connections, stop and/or delete them, and then click Create. Give the test a name, select sta0 and sta1 for ports, set rate to 100M, and set payload size. When complete, press Apply to create the new CX.

udp-flood - Create/Modify Cross Connect

+ - All Display Sync Batch-Create Apply OK Cancel

1 **Cross-Connect**

CX Name: udp-flood

CX Type: LANforge / UDP

	TX Endpoint	RX Endpoint
Resource:	1 (LEC2220-1)	1 (LEC2220-1)
Port:	6 (sta0)	7 (sta1)
Min Tx Rate:	100M (100 Mbps)	100M (100 Mbps)
Max Tx Rate:	Same	Same
Min PDU Size:	UDP P1d (1,472 B)	UDP P1d (1,472 B)
Max PDU Size:	Same	Same
IP ToS:	Best Effort (0)	Best Effort (0)
Pkts To Send:	Infinite	Infinite

- B. Create a second UDP connection on sta2 and sta3 interfaces. Change name, change ports, and press OK.

udp-flood-2 - Create/Modify Cross Connect

+ - All Display Sync Batch-Create Apply OK Cancel

1 **Cross-Connect**

CX Name: udp-flood-2

CX Type: LANforge / UDP

	TX Endpoint	RX Endpoint
Resource:	1 (LEC2220-1)	1 (LEC2220-1)
Port:	8 (sta2)	9 (sta3)
Min Tx Rate:	100M (100 Mbps)	100M (100 Mbps)
Max Tx Rate:	Same	Same
Min PDU Size:	UDP P1d (1,472 B)	UDP P1d (1,472 B)
Max PDU Size:	Same	Same
IP ToS:	Best Effort (0)	Best Effort (0)
Pkts To Send:	Infinite	Infinite

For more information see [LANforge User's Guide: Layer-3 Cross-Connects \(FIRE\)](#)

5. Run traffic tests concurrently, and view results.

- A. Select both CXs in the **Layer-3** tab, and click the **Start** button.
